IOB Governance Voting Guide (v1.0)

1. Overview

This guide explains **how governance voting works within IO Beats DAO** using Snapshot. It is written for token holders, contributors, and external reviewers (CEX, auditors, partners).

2. Voting Platform

Platform: Snapshot
Cost: Free (no gas fees)
Wallets Supported: MetaMask, WalletConnect, Safe
Voting Method: Off-chain signature

3. Who Can Vote

• Any wallet holding IOB tokens
• Voting power is calculated at proposal snapshot block
• Tokens must be held before voting starts

4. Voting Power Calculation

Voting power is determined by:
• IOB token balance
• Snapshot strategy (ERC-20 balance)

No delegation in v1.0 (planned in future upgrade).

5. Proposal Lifecycle

Step	Description
Proposal Draft	Created by eligible proposer with title, description, choices, duration
Voting Period	3–7 days, one vote per wallet, weighted by IOB balance
Outcome	Majority rules, quorum may apply
Execution	Executed by Safe multisig, transaction publicly visible

6. Proposal Types

• Treasury allocations
• Partnerships

- Roadmap approvals
- Governance changes
- Emergency signaling

7. Quorum & Thresholds (v1.0)

Quorum: 5–10% of circulating supply
Approval: Simple majority (>50%)

Parameters may evolve via governance vote.

8. Transparency

- All proposals are public
- Votes are publicly verifiable
- Execution is on-chain

9. Best Practices for Voters

- Review proposal details carefully
- Verify links and references
- Vote according to DAO values

10. Versioning

v1.0: Initial voting framework
